Native PFAS Solution/Mixture for U.S. EPA Method 1633

In July 2023, the U.S. EPA released the fourth draft of Method 1633, a highly anticipated method that allows for the quantification of up to 40 per- and polyfluoroalkyl substances (PFAS) in various matrices. To fully support our customers' needs, **Wellington** has released a new native PFAS solution/mixture, **EPA-1633STK**, which contains quantitative isomeric mixtures of PFAS that were previously not commercially available. **EPA-1633STK** can be diluted and/or combined with our existing **MPFAC-HIF-ES** and **MPFAC-HIF-IS** products to achieve the spiking and calibration solutions recommended by the method.
